                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified chNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of L.M.A.G.E. clones 262232-265223, 340488-345479, and 484488-489479.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note "Ordan: mixed (See below): Vector: pTTTN-Pac (Pharmacia) with a modified polylinker; Site_1: Not 1; Site_2: Eco RI: Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHPU, and fetal heart NbHH19W) were mixed, and see Fire
